Use of eukaryotic Initiation Factor 4E (elF4E) binding agents e.g. elF4E-binding peptide (elF4E-BP) derivatives as anticancer or antitumor agents for inducing apoptosis in e.g. mammalian tumor cells.

Example; Fig 5; 46pp; English.

The present sequence represents a peptide derived from an eukaryotic Initiation Factor 4G (eIF4G) protein. The specification describes elf and eIF4E binding agents, such as peptides or peptidemimetics. These binding agents are used for the induction of cell death. The binding peptides are used for inducing cell apoptosis. They are used in pharmaceutical compositions for anticancer or antitumor treatment of mammalian cells. Specifically, the peptides result in growth inhibitiof, or increased cytotoxicity to tumour cells inhibition eIF4G

The specification describes eIF4G and eIF4E binding agents, such as peptides or peptidemimetics. These binding agents are used for the induction of cell death. The binding peptides are used for inducing cell apoptosis. They are used in pharmaceutical compositions for anticancer or antitumor treatment of mammalian cells. Specifically, the peptides result in growth inhibition of, or increased cytotoxicity to tumour cells
                                                                                                                                                                                                                                                                                                                                                                 Sequence 12
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Use of eukaryotic Initiation Factor 4E (elF4E) binding agents e.g. elF4E-binding peptide (elF4E-BP) derivatives as anticancer or antitumor agents for inducing apoptosis in e.g. mammalian tumor cells.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Binding peptide; cell death; cell
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 A human eukaryotic Initiation

The present sequence represents a peptide derived from an eukaryotic Initiation Factor 4G (eIF4G) protein. The specification describes elf and eIF4E binding agents, such as peptides or peptidemimetics. These binding agents are used for the induction of cell death. The binding peptides are used for inducing cell apoptosis. They are used in pharmaceutical compositions for anticancer or antitumor treatment of mammalian cells. Specifically, the peptides result in growth inhibitiof, or increased cytotoxicity to tumour cells. note: the peptide is biotinylated and linked to penetratin

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      This invention describes a novel non-human transgenic animal (I) whose CC germ cells and somatic cells contain a knockout mutation in DNA encoding CC a 4E-BP1 (a member of eukaryotic initiation factor 4E (eIF-4E)-binding CC protein 1) shows a phenotype of an altered glucose and/or fat metabolism CC when compared to a control animal. The products of the invention have CC entidiabetic and anorectic activity. The non-human transgenic animals are CC energy homeostasis and associated diseases. The transgenic animals are CC energy homeostasis and associated diseases. The transgenic animals are CC expression and/or activity of 4E-BP1 and for screening drugs to isolate therapeutic agents which are useful as anti-obesity, anti-fat deposition disorders, anti-diabetes and anti-metabolic diseases associated with fat CC deposition disorders. The effect of the disruption of 4E-BP1 in the CC knockout mice demonstrates that an alteration of 4E-BP1 can modulate fat tissue growth, glucose metabolism and weight gain in an animal

The products of the invention have cuseful as models for the investigation of lipid and glucose metabolism, (C energy homeostasis and associated diseases. The transgenic animals are (C expression and/or activity of 4E-Bp1 and for screening drugs to isolate therapeutic agents which are useful as anti-obesty, anti-fat deposition (disorder, anti-diabetes and anti-metabolic diseases associated with fat (c knockout mice demonstrates that an alteration of 4E-Bp1 in the (c tissue growth, glucose metabolism and weight gain in an animal.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     protein 1) shows a phenotype of an altered glucose and/or fat metabolism when compared to a control animal. The products of the invention have antidiabetic and anorectic activity. The non-human transgenic animals are useful as models for the investigation of lipid and glucose metabolism, energy homeostasis and associated diseases. The transgenic animals are also useful for selection and identification of modulators of the expression and/or activity of 4E-BP1 and for screening drugs to isolate therapeutic agents which are useful as anti-obesity, anti-fat deposition disorder, anti-diabetes and anti-metabolic diseases associated with fat deposition disorders. The effect of the disruption of 4E-BP1 in the knockout mice demonstrates that an alteration of 4E-BP1 can modulate fat tissue growth, glucose metabolism and weight gain in an animal
           AAB84401-15 represent 4E-binding sites. 4E-binding protein 1 (4E-BP1) is a repressor of cap-dependent translation initiation, and selectively activates apoptosis in Ras-transformed fibroblasts and eliminates Ras-induced chemoresistance. The effects of 4E-BP1 are strictly dependent on its ability to sequester the translation initiation factor elF4E, thereby preventing its assembly into an active pre-initiation complex. The specification describes a method for inducing apoptosis in a cell in which the apoptosis pathway is inhibited. The method comprises decreasing the amount of elF4E pre-initiation complex by sequestration of elF4E.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             4E-binding site; 4E-binding protein; 4E-BP, cap-dependent translation initiation represtranslation initiation factor; elF4E; Ras;

                                                       AABB4401-15 represent 4E-binding sites. 4E-binding protein 1 (4E-BP1) is a repressor of cap-dependent translation initiation, and selectively activates apoptosis in Ras-transformed fibroblasts and eliminates Rasinduced chemoresistance. The effects of 4E-BP1 are strictly dependent on its ability to sequester the translation initiation factor elP4E, thereby preventing its assembly into an active pre-initiation complex. The specification describes a method for inducing apoptosis in a cell in which the apoptosis pathway is inhibited. The method comprises decreasing the amount of elF4F pre-initiation complex by sequestration of elF4E, thus relieving an apoptosis block. The method is useful for modulating pro-apoptotic and anti-apoptotic pathways in cells, especially in Rastransformed cells. Thus, the method is particularly useful for treating cancer. The elF4E sequestering agent, 4E-BP1 or its elF4E binding portion is useful for treating high proliferative cells
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        pro-apoptotic and anti-apoptotic pathways in cells, especially in Rastransformed cells. Thus, the method is particularly useful for treating cancer. The elF4E sequestering agent, 4E-BP1 or its elF4E binding portion is useful for treating high proliferative cells.                                                                                                                                               AABB4401-15 represent 4E-binding sites. 4E-binding protein 1 (4E-BP1) is a repressor of cap-dependent translation initiation, and selectively cactivates apoptosis in Ras-transformed fibroblasts and eliminates Ras-induced chemoresistance. The effects of 4E-BP1 are strictly dependent on its ability to sequester the translation initiation factor elf4E, thereby preventing its assembly into an active pre-initiation complex. The specification describes a method for inducing apoptosis in a cell in specification describes a method for inducing apoptosis in a cell in which the apoptosis pathway is inhibited. The method comprises decreasing the amount of elf4F pre-initiation complex by sequestration of elf4E, thus relieving an apoptosis block. The method is useful for modulating pro-apoptotic and anti-apoptotic pathways in cells, especially in Rastransformed cells. Thus, the method is particularly useful for treating cancer. The elf4E sequestering agent, 4E-BP1 or its elf4E binding portion is useful for treating high proliferative cells

The specification describes eIF4G and eIF4B binding agents, such as peptides or peptidemimetics. These binding agents are used for the induction of cell death. The binding peptides are used for inducing cell apoptosis. They are used in pharmaceutical compositions for anticancer or antitumor treatment of mammalian cells. Specifically, the peptides result in growth inhibition of, or increased cytotoxicity to tumour cells
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Use of eukaryotic Initiation Factor 4E (elF4E) binding agents e.g. elF4E-binding peptide (elF4E-BP) derivatives as anticancer or antitumor agents for inducing apoptosis in e.g. mammalian tumor cells.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Binding peptide; cell death; cell
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Peptide derived

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    S
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    This invention relates to novel, isolated full length human cDNA CC molecules and the encoded proteins thereof. Specifically, it refers to CC cDNA clones obtained by an oligo-capping method, where none of these CC clones are identical to any known human mRNAs. The present invention CC describes an immunoassay to identify agonists and antagonists, as well as antibodies, antisense molecules and siRNAs that can all be used to bind CC antibodies, antisense molecules and siRNAs that can all be used to bind to and modulate expression of the CDNA molecules. As such, these CC the various diseases or morbid states. In particular, they are useful in CC gene therapy for treating osteoporosis, neurological disease, Alzhaimer's CC disease, Parkinson's disease, dementia, short memory and various cancers, as well as for maintaining equilibrium of sense or motor function, and CC treating emotional reaction, fear response and panic. Accordinally, CC they exhibit osteopathic, neuroprotective, nootropic, antiparkinsonian, CC exception and tranquiliser activities. This sequence is not given in the sequence listing of the specification but office obtained on CD-ROM from the European Patent Office, Vienna Sub-
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Matches

```
that is differentially expressed in neuronal tissue of a first animal consultation which regulates the subjected to pain, a method for identifying a compound which regulates the expressed in an animal subjected to pain, a method for identifying a compound that regulates the activity of one or more of the compound that regulates the activity of one or more of the polynucleotides, a method for producing a pharmaceutical composition, a method for identifying a compound or small molecule that regulates the activity in an animal of one or more of the polypeptides given in the specification, a method for identifying a compound useful in treating pain and a pharmaceutical composition comprising the one or more conjumpeptides or their antibodies. The polypucleotide or the compound that modulates its activity is useful for preparing a medicament for treating pain (e.g. spinal segmental nerve injury (Chung), chronic constriction injury (CCI) and spared nerve injury (Chung), chronic constriction conjury (CCI) and spared nerve injury (Shi)) in an animal (e.g. gene conjury (CCI) and spared nerve injury (Shi)) in an animal (e.g. gene conjured that segmented is a human protein (shown in Table 2 of the specification) which is differentially expressed during pain. Note:

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          The invention discloses a composition comprising two or more isolated rat or human polynucleotides or a polynucleotide which represents a fragment, derivative or allelic variation of the nucleic acid sequence. Also claimed are a vector comprising the novel polynucleotide, a host cell comprising the vector, a method for identifying a nucleotide sequence which is differentially regulated in an animal subjected to pain and a kit to perform the method, an array, a method for identifying an agent that increases or decreases the expression of the polynucleotide sequence
                                                                                          Sequence 1395 AA;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         New composition comprising two or more isolated polypeptides, useful for preparing a medicament for treating pain in an animal.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        WPI; 2003-268312/26.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        The invention relates to human PRO polypeptides and the polynucleotides encoding them. The polypeptides and polynucleotides are useful for treating and diagnosing immune related disorders in mammals. The immune related disorders include systemic lupus erythematosus, rheumatoid arthritis, osteoarthritis, juvenile chronic arthritis, systemic sclerosis, Sjogren's syndrome, vasculitis, sarcoidosis, autoimmune haemolytic anaemia, autoimmune thrombocytopenia, thyroiditis, diabetes mellitus, immune-mediated renal disease, demyelinating diseases of the central or peripheral nervous system, demyelinating polyneuropathy, Guillain-Barre syndrome and chronic inflammatory demyelinating polyneuropathy. This sequence represents a human PRO polypeptide of the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Novel PRO polypeptide e.g., PRO69614, PRO71106, or PRO86388 useful for treating an immune related disorder such as systemic lupus erythematosus, rheumatoid arthritis, osteoarthritis, juvenile chronic arthritis or

```
The present invention describes an isolated PRO nucleic acid (I). Also CC described: (I) a vector comprising (II; (2) a host cell comprising the CC vector of (I); (3) a process for producing a PRO polypeptides; (4) an CC isolated PRO polypeptide; (5) a chimeric molecule comprising the CC polypeptide of (4) fused to a heterologous amino acid sequence; (6) an CC antibody which specifically binds to a polypeptide of (4); (7) a CC composition of matter comprising a polypeptide of (4), an agonist or CC antagonist of the polypeptide or an antibody that binds to the CC comprising a container, a label on the container and a composition of CC matter of (7); (9) a method of treating an immune related disease in a CC mammal; (10) a method of treating an immune related disease in a CC diagnosing an immune related disease or an inflammatory immune response CC in mammal; (12) a method of identifying a compound that inhibits or CC diagnosing an immune related disease or an inflammatory immune response CC in mammal; (12) a method of identifying a compound that inhibits or CC mimics the activity of or expression of a gene encoding a PRO polypeptide CC antiasthmatic, antidiabetic, antianimatory, antiarthritic, CC antiasthmatic, antidiabetic, antiinflammatory, antiarthritic, CC antiasthmatic, antidiabetic, antiinflammatory, antiartorintestinal, CC antinostatic, hepatotopic, CC immunostimulant, immunosuppressive, muscular, cepture of the polypeptides, compositions, kits and methods are CC useful in diagnosing and treating an immune related disease and in
erythematosus, rheumatoid arthr stimulating an immune response.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Claim 1; SEQ ID NO 707; 3009pp; English.

                                                                                                                                                                                                                                            The present sequence represents the human ribosome recruitment protein elF4G1. The protein is used for the translational activation of genes. The elF4G1 protein is an RNA-binding protein. The protein is also used for the translation of RNA molecules containing protein binding sites, identifying RNA-binding proteins, protein-protein interactions, or inhibitors or enhancers of the interactions, providing a cell or subject with therapeutic proteins, controlling the levels of translation of the therapeutic proteins, controlling the translation and stockhometry of multiple subunit proteins, screening proteins that interact with an RNA binding site, and identifying the RNA binding sites
                                                                                                                                                                                                                                                                                                                                                                                                                                                                             New nucleic acid encoding an RNA with a coding region and protein binding sites in an adjacent 5' non-coding region for translational activation of genes using the ribosome recruitment protein eIF4G.

No. is the number of results predicted by chance to have a
score greater than or equal to the score of the result being printed,
and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                DB 08

(UYDU-) UNIV DUNDEE.

The present sequence represents a binding peptide for an eukaryotic Initiation Factor 4G (eIF4G) protein. The specification describes eIF4G and eIF4E binding agents, such as peptides or peptidemimetrics. These binding agents are used for the induction of cell death. The binding peptides are used for inducing cell apoptosis. They are used in pharmaceutical compositions for anticancer or antitumor treatment of mammalian cells. Specifically, the peptides result in growth inhibition of, or increased cytotoxicity to tumour cells

                                                                                                                                                                                                                                                                                                                                                                                                    The present sequence represents a peptide derived from an eukaryotic Initiation Factor 4G (eIF4G) protein. The specification describes eIF4G and eIF4E binding agents, such as peptides or peptidemimetics. These binding agents are used for the induction of cell death. The binding peptides are used for inducing cell apoptosis. They are used in pharmaceutical compositions for anticancer or antitumor treatment of mammalian cells. Specifically, the peptides result in growth inhibition of, or increased cytotoxicity to tumour cells
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Use of eukaryotic Initiation Factor 4E (elF4E) binding agents e.g. binding peptide (elF4E-BP) derivatives as anticancer or antitumor \varepsilon for inducing apoptosis in e.g. mammalian tumor cells.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Triticum sp

and eIF4E binding agents, such as peptides or peptidemimetics. These binding agents are used for the induction of cell death. The binding peptides are used for inducing cell apoptosis. They are used in pharmaceutical compositions for anticancer or antitumor treatment of mammalian cells. Specifically, the peptides result in growth inhibition of, or increased cytotoxicity to tumour cells. note: the peptide is biotinylated and linked to penetratin
                                                                                                                                                                                                                                                                                  Eukaryotic initiation factor; eIF4E; transgenic animal; antidiabetic; knockout mutation; 4E-BP1; glucose metabolism; fat metabolism; anorectic; drug; anti-obesity; anti-fat deposition; anti-metabolic.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Use of eukaryotic Initiation Factor 4E (elF4E) binding agents e.g. elF4E-binding peptide (elF4E-BP) derivatives as anticancer or antitumor agents for inducing apoptosis in e.g. mammalian tumor cells.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          This invention describes a novel non-human transgenic animal (I) whose compared cells and somatic cells contain a knockout mutation in DNA encoding A 4E-BP1 (a member of eukaryotic initiation factor 4E (eIF-4E)-binding protein 1) shows a phenotype of an altered glucose and/or fat metabolism compared to a control animal. The products of the invention have arridiabetic and anorectic activity. The non-human transgenic animals are useful as models for the investigation of lipid and glucose metabolism. CC energy homeostasis and associated diseases. The transgenic animals are cery homeostasis and associated diseases. The transgenic animals are cery ession and/or activity of 4E-BP1 and for screening drugs to isolate therapeutic agents which are useful as anti-obesity, anti-fat deposition cd deposition disorders. The effect of the disruption of 4E-BP1 in the cknockout mice demonstrates that an alteration of 4E-BP1 in the crissue growth, glucose metabolism and weight gain in an animal. (Updated con 06-AUG-2003 to correct OS field.)

The effects of 48-BP1 are strictly dependent on its ability to sequester the translation initiation factor elf4E, thereby preventing its assembly into an active pre-initiation complex. The specification describes a method for inducing apoptosis in a cell in which the apoptosis pathway is inhibited. The method comprises decreasing the amount of elf4F pre-initiation complex by sequestration of elf4E, thus relieving an apoptosis block. The method is useful for modulating pro-apoptotic and anti-apoptotic pathways in cells, especially in Ras-transformed cells. Thus, the method is particularly useful for treating cancer. The elf4E sequestering agent, 4E-BP1 or its elf4E binding portion is useful for treating high proliferative cells
                                                                                                                                                                                                                                                                                                                                                                                                        Plant; transgenic; cold tolerance; growth rate; drought tolerance; disease resistance; galactomannan production; heat tolerance; herbicide tolerance; lignin production; extreme osmotic condition tolerance; pathogens resistance; pest resistance; yield improvement; seed oil yield; seed protein yield.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    AAB84401-15 represent 4E-binding sites. 4E-binding protein 1 (4E-BP1) is a repressor of cap-dependent translation initiation, and selectively
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Disclosure; Fig 6;

```

The invention relates a recombinant DNA construct comprising a polynucleotide having any of 5544 nucleotide sequences (cDNAs 1-5544) and encoding a polypeptide with any of 5544 amino acid

SEQ ID NO: sequences

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    CC producing a plant having an improved property, comprising transforming a CC plant with a recombinant DNA construct comprising transforming a CC plant with a recombinant DNA construct comprising transformed CC functional in a plant cell operably joined to a polynucleotide encoding a CC polypeptide associated with the property, and growing the transformed CC plant. The property is selected from improving plant cold tolerance, for committee the improving plant cold tolerance, for providing increased CC pathway, for improving plant drought tolerance, for providing increased CC resistance to plant disease, for galactomannan production, for production of plant tolerance to herbicides, for inproving plant tolerance, for committee to pathogens or pests, for lignin production, for improving plant tolerance to extreme commotic conditions, for improving plant tolerance to extreme commotic conditions, for improving plant tolerance to pathogens or pests, for yield improvement by modification of photosynthesis, for modifying seed oil yield and/or content, for modification of carbohydrate, nitrogen or phosphorus use and/or uptake CC and for yield improvement by providing improved plant growth and development under at least one stress condition. The polynucleotide may CC also encode a plant transcription factor. The methods and compositions of the present invention are useful in the field of biochemistry and CC genetics, in particular for producing transgenic plants with improved Diont tolerance to extreme osmotic and drought conditions, and improving plant colerance to extreme osmotic and drought conditions, and improving plant colerance to plant pests or pathogens is one of the 5544 plant protein conditions of the invention.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            នន្តន្តន្តន្ត្
                                     CC and polypeptides. Also disclosed are vectors, expression cassettes, host cells, and plants containing such polynucleotides. Also disclosed are cc methods for using the polynucleotides and polypeptides to alter the responsiveness of a plant to abiotic stress. The invention is useful in cc agriculture. The nucleic acid is useful for determining whether a test contains the polynucleotide stress condition. It is also useful cc for selecting an agent that alters abiotic stress condition. It is also useful cc polynucleotide expression in a plant cell, and to identify a homolog or cortholog to an abiotic stress responsive polynucleotide. The nucleic acid cc molecule and the polypeptide encoded by it are useful in altering the cc responsiveness of a plant to an abiotic stress, such as cold stress, salt cc stress, osmotic stress or any of their combinations. The present sequence cc is used in the exemplification of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   ঠ
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Query Match

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      stress response. They are also useful for producing transgenic plants having improved properties, e.g. tolerance to pests, herbicides, or biotic or abiotic stresses, improved nutritional value, increased yield or proliferation, or improved structure causing less loss from lodging or shattering. The present amino acid sequence represents a rice stress-related protein of the invention.

                                                                                                                                                                             This invention describes a novel non-human transgenic animal (I) whose germ cells and somatic cells contain a knockout mutation in DNA encoding CC a 4E-BP1 (a member of eukaryotic initiation factor 4E (eIF-4E)-binding CC protein 1) shows a phenotype of an altered glucose and/or fat metabolism CC when compared to a control animal. The products of the invention have antidiabetic and anorectic activity. The non-human transgenic animals are CC useful as models for the investigation of lipid and glucose metabolism, CC energy homeostasis and associated diseases. The transgenic animals are CC also useful for selection and identification of modulators of the cxpression and/or activity of 4E-BP1 and for screening drugs to isolate therapeutic agents which are useful as anti-obesity, anti-fat deposition CC disorder, anti-diabetes and anti-metabolic diseases associated with fat deposition disorders. The effect of the disruption of 4E-BP1 in the kinckout mice demonstrates that an alteration of 4E-BP1 can modulate fat
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Matches

                                                                                                                                                                                                                   Query Match
                                                                                                                                                                                                                                                                   AABB4401-15 represent 4E-binding sites. 4E-binding protein 1 (4E-BP1) is a repressor of cap-dependent translation initiation, and selectively activates apoptosis in Ras-transformed fibroblasts and eliminates Rasinduced chemoresistance. The effects of 4E-BP1 are strictly dependent on its ability to sequester the translation initiation factor elf4E, thereby preventing its assembly into an active pre-initiation complex. The specification describes a method for inducing apoptosis in a cell in which the apoptosis pathway is inhibited. The method comprises decreasing the amount of elf4E pre-initiation complex by sequestration of elf4E, thus relieving an apoptosis block. The method is useful for modulating pro-apoptotic and anti-apoptotic pathways in cells, especially in Rastransformed cells. Thus, the method is particularly useful for treating cancer. The elf4E sequestering agent, 4E-BP1 or its elf4E binding portion is useful for treating high proliferative cells
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Inducing apoptosis in a cell in which the apoptosis pathway is inhibited, useful for treating cancer or highly proliferative cells, comprises decreasing the amount of elF4F pre-initiation complex, relieving an apoptosis block.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         WPI;

                                                                         용
                                                                                                     ঠ
                                                                                                                                                                                                                                                                    The invention describes a recombinant DNA construct comprising a conjunct consisting of a sequence encoding an amino acid sequence or valiable in electronic form from the US patent office at the interest of the sequence encoding an amino acid sequence of the invention are also useful in physical arrays of molecules and as plant breeding markers. The recombinant DNA construct is useful for improving plant tolerance to cold, heat, drought, herbicides, extreme commotic conditions, pathogens or pests, for manipulating growth rate in plant cells by modification of the cell cycle pathway, for conferring conformation in plant disease, for producing galactomannan, constructed resistance to plant disease, for producing galactomannan, constitution of plant growth regulators, for increasing the rate of homologous crecombination in plants, for improving yield by modification of photosynthesis or carbohydrate, nitrogen or phosphorus use and/or uptake corporate or providing improved plant growth and development under at least one stress condition or for modifying seed oil or protein yield and/or content. This is the amino acid sequence of a plant full length insert complypeptide that can be used in the recombinant DNA construct of the
                                                                                                                                          Query Match
